INTRODUCTION

The National Council of State Boards of Nursing, Inc., is committed to maintaining itself as a clearinghouse of information on the activities of its 61 member boards of nursing. This publication represents a continuation of the National Council's efforts to be responsive to the information needs of its member boards of nursing and the public whom they protect through the regulation of nursing practice at the state level. Provided in this publication are the 1998 statistics on the licensing activities of the National Council's Member Boards and its two licensure examinations, the National Council Licensure Examination for Practical Nurses (NCLEX-PN[®] examination) and the National Council Licensure Examination for Registered Nurses (NCLEX-RN[®] examination).

The data included in this publication provide licensing statistics for the period July 1, 1997 - June 30, 1998.

On April 1, 1994, the National Council began administering the NCLEX[®] examination via computerized adaptive testing (CAT) for both the NCLEX-RN[®] examination and NCLEX-PN[®] examination. Because the NCLEX examination is now available on a year-round basis, candidate performance is summarized and reported for each quarter, representing a three-month period of time.

This publication provides the examination statistics for a one-year period, January 1998 - December 1998.

PART I

1998

LICENSURE STATISTICS

DEFINITIONS

REINSTATEMENT is defined as the reactivation of revoked, suspended, or lapsed licenses and is not considered part of routine renewal.

ACTIVE LICENSE figures are based upon the reported actual or estimated total number of individuals holding an active license within a jurisdiction. Whereas the processing figures provide a measure of the magnitude of board operations, the active license figures represent the nurses available for employment. Due to an unknown number of individuals holding active licenses in more than one jurisdiction, the total number of active licenses does not represent the total number of licensees.

SPECIALTY LICENSES contain data for Advanced Practice Registered Nurse (APRN) groups: Certified Registered Nurse Anesthetist (CRNA), Certified Nurse Midwife (CNM), Certified Nurse Specialist (CNS), CNS-

LICENSURE EXAMINATION STATISTICS**

INTRODUCTION TO PART II: 1998 Licensure Examination Statistics

The National Council Licensure Examination for Registered Nurses (NCLEX-RN[®] examination) and the National Council Licensure Examination for Practical Nurses (NCLEX-PN[®] examination) are administered to licensure candidates on behalf of the National Council's member boards of nursing. The purpose of the licensing examination is to determine if a licensure candidate possesses the minimum knowledge, skills, and abilities to provide safe and effective nursing care at an entry level.

On April 1, 1994, the National Council instituted the use of the NCLEX[®] examination via computerized adaptive testing (CAT) for the NCLEX-RN and NCLEX-PN examinations. The NCLEX examination is available on a year-round basis and statistical information provided by the National Council's test service is reported as follows:

- (1) Information regarding performance by type of candidate, state of licensure and type program, and country of origin for foreign-educated nurses are reported on a quarterly basis.
- (2) Charts indicate national passing rates by type of program for first-time, U.S.-educated candidates and all examinees, reported by quarter from 1994 forward and in six-month periods prior to 1994.
- (3) Annual summary statistics are reported by type of program for first-time, U.S.-educated candidates only.

In keeping with the purpose of licensure examinations, the results are reported as the percent passing. The passing criterion is equivalent to the level of competence a candidate must demonstrate in order to provide a safe and effective standard of nursing care. Definitions of selected statistical terms are provided in Appendix A.

Table 11. Summary Statistics for First-Time, U.S.-Educated Candidates Taking NCLEX-RN[®] Examination, January - December 1998

NCLEX-RN [®] Examination	
January - December 1998	
*Passing Standard	
January - March 1998	-0.4200
April - December 1998	-0.3500
Estimated Decision Consistency	0.91
Average Number of Test Items (questions) Taken	120
Percent Taking Minimum Number of Items	51.1%
Percent Taking Maximum Number of Items	12.8%
Average Testing Time	2 hr 8 min
Percent Taking Maximum Amount of Time	2.6%

See Appendix A for definitions of terms

*The passing standard was raised from -0.4200 to -0.3500 on April 1, 1998. The passing standard is presented in units, called logits, on the Rasch measurement scale

APPENDIX A

LICENSURE EXAMINATION SUMMARY STATISTICS DEFINITIONS

Average Number of Test Items (questions) Taken. Average number of items (questions) on which candidate performance is determined. In a variable-length Computerized Adaptive Test (CAT), candidates are administered items only until they satisfy one of the following stopping rules:

- 1) A candidate's measure of competence is known to be above or below the passing standard with at least 95 percent confidence (is significantly above or below the standard) and at least the minimum number of questions has been answered.
- 2) A candidate has taken the maximum number of questions.
- 3) A candidate has been testing for the maximum time.

CAT-Computerized Adaptive Testing. Candidates are administered items appropriate for their current estimated competence level until a confident pass or fail decision can be made, the maximum number of items is answered, or they run out of time.

Estimated Decision Consistency. A measure of examination reliability appropriate for CAT. It is the proportion of pass/fail decisions that would remain the same if all candidates were to be retested with parallel examinations.

***Passing Standard.** The minimum level of competence a candidate must demonstrate to pass the examination. Currently, the passing standard effective April 1998 is -0.3500 for the NCLEX-RN[®] examination and -0.5100 for the NCLEX-PN[®] examination. The RN and PN standards are not directly comparable because they are based on different item pools.

*These statistics are in units, called logits, on the Rasch measurement scale. There is no inherent meaning of the units; they represent an arbitrary scale useful for reporting relative differences. This scale can be used for two purposes: (1) to measure degree of candidate competence (-2 = low; +2 = high), and (2) degree of item difficulty (-2 = easy; +2 = hard).
